# Your Player Props Are a <span style="color:yellow">Ticking Time Bomb</span>

You're taking millions in player prop bets. Your models are running, your risk is managed.

Or is it?

# The "Official" Data Isn't Enough

A key player's minutes are cut by 50% due to an unseen fatigue or health issue. Your model, based on historical stats and public reports, is blind to this.

**The official injury report is a reaction, not a prediction.**

# The **Costly Hole** in Your Data Stack

## Most models focus on skill and statistics

They miss the most critical variable: a player's availability.
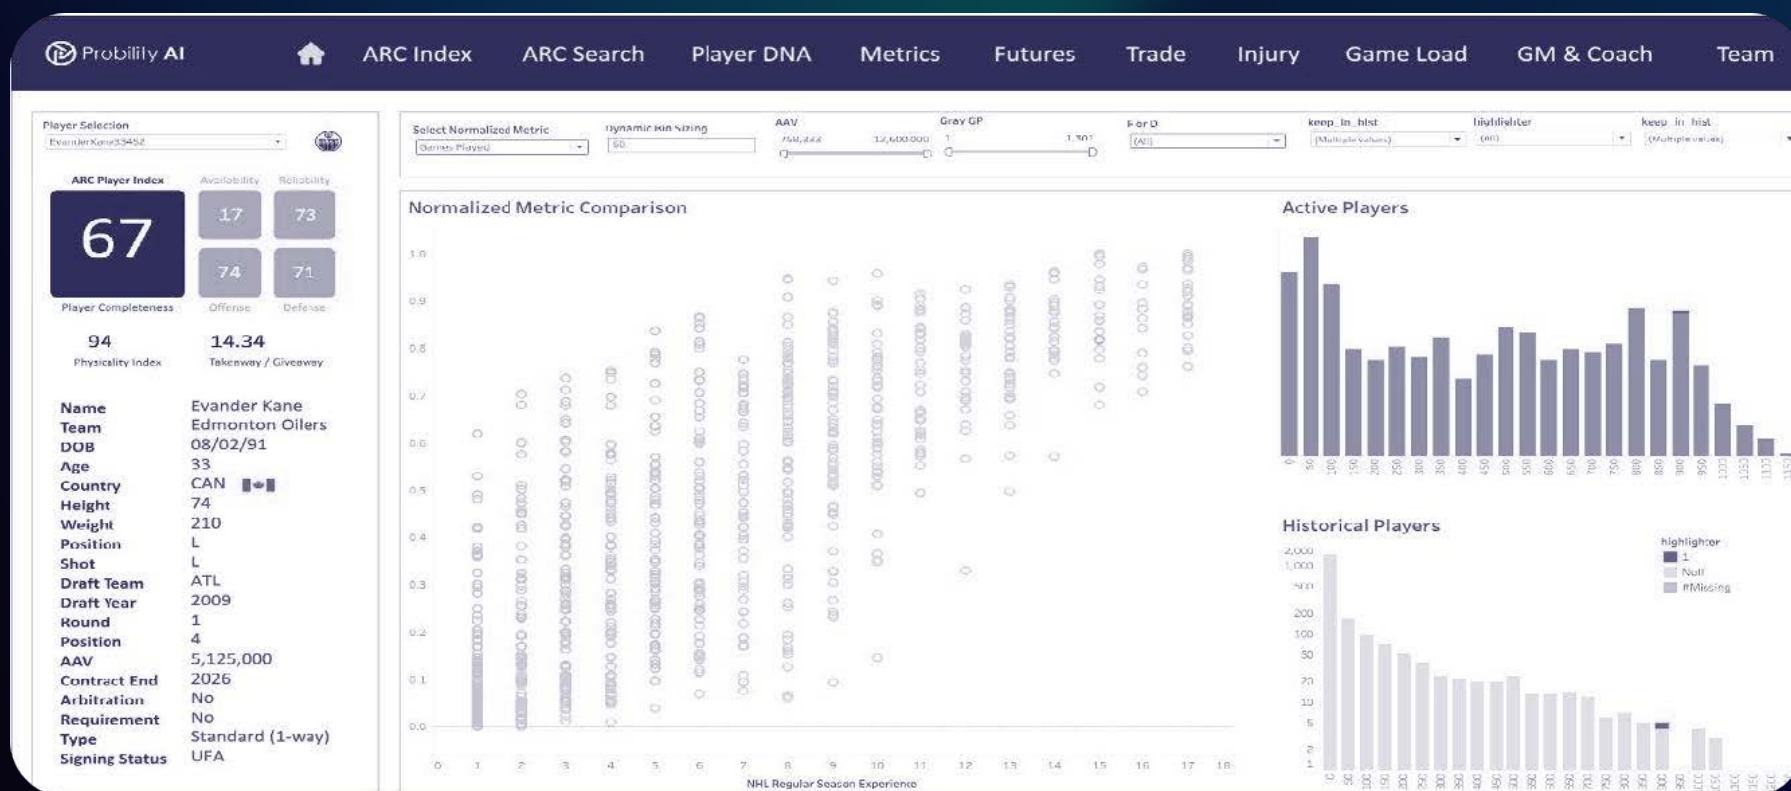

## This isn't just a data point

It's the foundation of a prop bet's success or failure.

## This gap leads to massive exposure

And significant lost revenue for your operation.

# Introducing Predictive Player Analytics

We've built the first and only accurate platform that predicts injury occurrence and severity.

More importantly, we forecast **playing time**—data your competitors simply don't have.

It's not about the player's skill; it's about their presence.

# A Competitive Edge You Can't Afford to Ignore

This is the data that turns a blind spot into a competitive advantage.

## Boost profitability

By setting sharper lines

## Minimize risk

From unexpected player changes

## Gain first-mover advantage

In key markets

**This isn't a new tool; it's a new layer of intelligence.**

# Stop Reacting. Start Predicting.

Want to see how we can de-risk your prop betting portfolio?
